Boost your surveillance operation with Advanced AI Video Analytics

Transform your surveillance operation to receive reliable real-time alerts as well as easy forensic search, and operational intelligence at scale.

See what matters, when it matters.

AI video analytics keeps watch of all your incoming video, detecting everything within your cameras' fields of view that matches your interests and needs.

Eliminating the need for operators to be on constant watch, AI detection will provide real-time notifications to allow operators to react quickly when needed.

Works with any IP camera

Best TCO in the industry

On-prem & cloud deployment

Personalised AI detection

A watchful eye 24/7

Reliable, real-time alerts

Metadata generated

Highest detection accuracy

Your eyes on the ground, 24/7

Over 15 AI detection events to choose from including:

Intrusion

Loitering

Fire & Smoke

Slip & fall

Rail trespassing

Unattended objects

Line Crossing

Traffic Monitoring

Anomalies

## Detect anything that matters to you

**Watching for something specific?
No problem.**

You define what to watch for, AI detection will do the rest, and notify you in real-time, allowing for a quick response.

The advanced detection algorithms also constantly generate metadata, allowing you to collect operational intelligence and business insights for better decision making and optimal operation.

Allow your operators to stay on top of things, seeing what matters, when it matters.

You can stop watching and storing terabytes of video data every day.

Let AI do the heavy lifting and store only what is relevant.
