

## Next level site protection with fully automated drone services

Effortlessly protect, monitor, or inspect your site with our fully automated drone services. You can operate your drone from anywhere in the world via a secure internet connection.

## Enhance your business operations

Improve your business's efficiency, cost effectiveness, and resource management with our automated drone services.

Drones will automatically deploy, fly, return to base, and recharge, eliminating the need for onsite pilots or any physical intervention.

With fast and reliable surveillance, you can ensure that any potential issues are quickly identified, allowing you to swiftly react and respond.

operations

Simple to  
implement

## Create your own bespoke missions

Our versatile command and control software provides you with many functionalities tailored to your operational needs. Remotely design your own missions to suit your exact requirements, assume control of your designated platforms and efficiently manage the captured data. You can integrate your drone with your existing security systems to respond automatically to alarms and triggers.

From real-time monitoring to post mission analysis, automated drone services are a cohesive solution to help you optimise your operation workflow and keep your business protected.

## Completely self-maintained

The station is built around an automated recharging system and is completely self-maintained. The drone is charged through the station, and all vital signs are monitored through the station's diagnostic systems, meaning the system is always ready to go when you need it.

## Efficient data management

Transferring data to cloud-based servers enables you to view and access your captured data from any location, providing you with complete situational awareness in real-time, and eliminating the need to physically interact with the drone for data retrieval.

Applications for automated drone services are almost endless. Our drones provide round the clock support to a wide range of sectors including:

- Construction
- Facilities Management
- Security & defence
- Utilities
- Infrastructure
- Transportation
- Emergency Services
- Manufacturing
